

# Neonode Workbench 2.22.1

## Contents of Release

- New features
- Bug fix
- Updated workspace

## New features

- Added the possibility to configure two sensors simultaneously, in order to map two sensors to different parts of the screen. Read more about this function in the section about [Selective Area Touch](#).
- Updated the workspace to support two sensors. If you would like a workspace with the support for even more sensors, please contact our support.

## Fixed bugs

- Fixed a crash that could happen on very rare occasions.
